## Vibrating level switch Models TLS-S, TLS-C, TLS-H

For further approvals, see page10

## Applications

- General purpose vibrating level switch designed to suit all liquids
- Particularly suitable as overflow and dry run protection of pumps, vessels and pipelines
- For use in the petroleum, chemical, water/wastewater, food, beverage and pharmaceutical industries

## Special features

- Compact design
- Low maintenance costs
- Stable and reliable level detection, unaffected by flow, bubble formation, vibrations, build-up or solids in the medium

The vibrating level switches are, depending on the version, suitable for an operating temperature of $-100 \ldots+200^{\circ} \mathrm{C}\left[-148 \ldots+392^{\circ} \mathrm{F}\right]$ and an operating pressure of $-1 \ldots+100$ bar $[-14 \ldots+1,450 \mathrm{psi}]$. The vibrating level switch is suitable for media with a density of $500 \ldots 2,500 \mathrm{~g} / \mathrm{cm}^{3}$ [289 ... 1,445 oz/in ${ }^{3}$ ]. The viscosity of the media should be between 0.1 and $10,000 \mathrm{cP}[0.24$ and $21,190 \mathrm{lb} / \mathrm{ft} \cdot \mathrm{h}]$.

## Description

Vibrating level switch, model TLS

The respective switch point can be changed via a pipe extension. The high switch point accuracy can be individually adjusted to the respective application using ten sensitivity levels. It is also possible to set a switching delay of 1 ... 20 seconds with the model TLS-S. For use in hazardous areas, explosion-protected versions are also available.
The core element of the vibrating level switch is the vibrating fork with integrated vibration drive. When the vibrating tuning fork is immersed in the medium, the resonance frequency of the tuning fork decreases. The frequency change is detected by the electronic circuit and is converted to a switching signal. Irrespective of the mounting position, level changes can be detected very accurately.

## Application example

In practice, the WIKA vibrating level switches are mainly used in two areas: Firstly, the level switches are used to detect and control high and low levels in liquid vessels. Secondly, the vibrating level switches are used to detect liquids in pipelines to prevent the pump from running dry.

## Level detection for vessels

The vibrating level switch is usually installed on the side of the tank to detect the upper and lower liquid levels. If the vessel has no side openings, the limit level switch can also be mounted on the tank from above. A pipe extension is then often used to achieve the desired switch point. Installation on the underside of the tank is also possible.

## Pipeline monitoring

To ensure that a pump does not run dry, there must be sufficient liquid in the intake pipe. The vibrating level switch can detect this and thereby prevent damage to the pump. Since the tuning fork only protrudes 38 mm [ 1.5 in ] into the pipeline, it can be used to measure in small diameter pipelines.

## Overview of versions

| Model | Description |
| :--- | :--- |
| TLS-S | Vibrating level switch, also available in Ex version |
| TLS-CC | Vibrating level switch, compact version with angular connector DIN 175301 |
| TLS-CM | Vibrating level switch, compact version with circular connector M12 $\times 1$ |
| TLS-HC | Vibrating level switch, Hygienic Design with angular connector DIN 175301 |
| TLS-HM | Vibrating level switch, Hygienic Design with circular connector M12 $\times 1$ |

## TLS-S

## TLS-C, TLS-H

4-pin coupler connector per DIN EN 175301-803, with electrical connection M16 x 1.5

## TLS-C, TLS-H

## Circular connector M12 x 1, 4-pin

## Approvals

| Logo | Description | Region |
| :--- | :--- | :--- |
| E | EU declaration of conformity | European Union |
|  | EMC directive |  |
|  | EN 61326 emission (group 1, class B) and immunity (industrial environments) |  |
| RoHS directive | UKCA |  |
| CR | Electromagnetic compatibility regulations | United Kingdom |
|  | Restriction of hazardous substances (RoHS) regulations |  |

Optional approvals only for model TLS-S

| Logo | Description |  | Region |

## Certificates (option)

## Certificates

Certificates ■ 2.2 test report per EN 10204 (e.g. state-of-the-art manufacturing, material proof)
3.1 inspection certificate per EN 10204 (e.g. material proof for wetted metal parts)

## Ordering information

Model / Operating pressure / Operating temperature / Material / Electrical connection / Process connection / Switching output / Insertion length

To order the described product the order number is sufficient.
