## Threaded resistance thermometer With perforated protection tube model TW35 Model TR10-J

## ( <br> 國 <br> EH[Ex $\mathbf{Y}$ <br> 

## Applications

- Ventilation ducts
- Air-conditioning systems
- Room temperature measurement under difficult conditions
- Building control systems
- Sanitary, heating and air-conditioning technology

## Special features

- Sensor ranges from $-196 \ldots+600^{\circ} \mathrm{C}\left[-320 \ldots+1,112^{\circ} \mathrm{F}\right]$
- With integrated perforated protection tube model TW35

■ Explosion-protected versions are available for many approval types (see page 2)

## Description

Resistance thermometers of this series are designed for screw-fitting directly in ventilation ducts.

Due to the perforation, the measuring insert is in direct contact with the medium. This considerably improves the response time. The measuring insert is sealed towards the connection head so that no medium can escape outside.

Insertion length, process connection, protection tube design, connection head, type and number of sensors, accuracy and connection method can each be selected to suit the respective application.
for further approvals
see page 2

Model TR10-J with perforated protection tube model TW35

A large number of different explosion-protected approvals are available for the TR10-J.

Optionally we can fit analogue or digital transmitters from the WIKA range into the connection head of the TR10-J.

Part of your business

## Explosion protection (option)

The permissible power, $P_{\text {max }}$, as well as the permissible ambient temperature, for the respective category can be seen on the certificate for hazardous areas or in the operating instructions.

Transmitters have own certificates for hazardous areas. The permissible ambient temperature ranges of the built-in transmitters can be taken from the corresponding transmitter operating instructions and approvals.

## Ingress protection per IEC/EN 60529

Degrees of protection against solid foreign bodies (defined by the first index number)

| First index number | Degree of protection / short description | Test parameter |
| :--- | :--- | :--- |
| $\mathbf{5}$ | Dust-protected | per IEC/EN 60529 |
| $\mathbf{6}$ | Dust-tight | per IEC/EN 60529 |
| Degrees of protection against water (defined by the second index number) |  |  |
| Second index number | Degree of protection / short description | Test parameter |
| $\mathbf{4}$ | Protected against splash water | per IEC/EN 60529 |
| $\mathbf{5}$ | Protected against water jets | per IEC/EN 60529 |
| $\mathbf{6}$ | Protected against strong water jets | per IEC/EN 60529 |
| $\mathbf{7}^{1)}$ | Protected against the effects of temporary immersion in water | per IEC/EN 60529 |
| $\mathbf{8}^{1)}$ | Protected against the effects of continuous immersion in water | by agreement |

1) Ingress protections, describing temporary or permanent immersion, on request

Standard ingress protection of model TR10-J is IP65.
The stated degrees of protection apply under the following conditions:

- Use of a suitable cable gland
- Use of a cable cross-section appropriate for the gland or select the appropriate cable gland for the available cable
- Adhere to the tightening torques for all threaded connections

## Transmitter

## Mounting onto the measuring insert

With mounting on the measuring insert, the transmitter replaces the terminal block and is fixed directly to the terminal plate of the measuring insert.

Fig. left: Measuring insert with mounted transmitter (here: model T32) Fig. right: Measuring insert prepared for transmitter mounting

| Transmitter models |  |
| :--- | :--- | :--- |

Possible mounting positions for transmitters

The mounting of a transmitter on the measuring insert is possible with all the connection heads listed here. The fitting of a transmitter in the (screw) cap of a North American design connection head is not possible.
Mounting of 2 transmitters on request.
For a correct determination of the overall measuring deviation, the sensor and transmitter measuring deviations must be added.

## Functional safety (option)

with temperature transmitter model T32

In safety-critical applications, the entire measuring chain must be taken into consideration in terms of the safety parameters. The SIL classification allows the assessment of the risk reduction achieved by the safety installations.

Selected TR10-J resistance thermometers, in combination with a suitable temperature transmitter (e.g. model T32.1S, TÜV certified SIL version for protection systems developed
in accordance with IEC 61508), are suitable as sensors for safety functions to SIL 2.

For detailed specifications, see Technical information IN 00.19 at www.wika.com.

## Components model TR10-J

Fig. with parallel thread, for tapered thread see "Process connection"

Legend:
(1) Connection head
(2) Protection tube model TW35
(3) Process connection
(4) Measuring insert
(5) Transmitter (option)
(6) Neck tube
$\mathrm{U}_{1} \quad$ Insertion length
$\mathrm{F}_{1} \quad$ Protection tube diameter
$\mathrm{N}\left(\mathrm{M}_{\mathrm{H}}\right)$ Neck length

## Protection tube model TW35

## Protection tube design

## Protection tube straight, form 2G DIN 43772

## Protection tube versions

The protection tube is made of drawn tube with a welded bottom and is screwed into the connection head. The cable outlet can be aligned by redating the connection head. The process connection, in accordance with the customer specification, is welded onto the protection tube in the factory, which also fixes the insertion length. Insertion lengths to DIN standards are preferable.

Designs to DIN standards and also special designs (e.g., with tapered protection tube, reinforced neck tube, etc.) are available in 1.4571 stainless steel or special materials on request.

For further technical specifications on the protection tube please see WIKA data sheet TW 95.35.
$\left.\begin{array}{|l|l|l|l|l|}\hline \begin{array}{l}\text { Protection tube in } \\ \text { accordance with DIN 43772 }\end{array} & \begin{array}{l}\text { Insertion } \\ \text { length }\end{array} & \text { Process connection } & \begin{array}{l}\text { Protection tube external } \\ \text { diameter } F_{1}\end{array} & \text { Neck length N } \\ \hline \text { Design 2G } & 160 & \text { G } 1 / 2 \mathrm{~B}, \text { mounting thread } & 8,11,12 \text { or } 14 \mathrm{~mm} & 130 \\ \hline \text { Design 2G } & 250 & \text { G 1 B, mounting thread }\end{array}\right)$

Above designs are also available with $1 / 2$ NPT process connection. In this case, however, these will not conform to DIN 43772.

## Process connection

## Type of threaded connection

- Male thread, welded with protection tube
- Compression fitting, primarily with 12 mm diameter protection tubes
(Compression fittings allow simple adjustment to the required insertion length at the installation point.
After tightening, the compression fitting can no longer be moved along the protection tube.)
- Union nut

| Connection type | Protection tube diameter |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | $\mathbf{9 m m}$ | 11 mm | 12 mm | 14 mm |
| Male thread | $\mathrm{G} 1 / 2 \mathrm{~B}$ | $\mathrm{G} 1 / 2 \mathrm{~B}$ | $\mathrm{G} 1 / 2 \mathrm{~B}$ | $\mathrm{G} 1 / 2 \mathrm{~B}$ |
|  | - | G 1 B | G 1 B | G 1 B |
|  | $1 / 2 \mathrm{NPT}$ | $1 / 2 \mathrm{NPT}$ | $1 / 2 \mathrm{NPT}$ | $1 / 2 \mathrm{NPT}$ |
|  | $\mathrm{M} 20 \times 1.5$ | $\mathrm{M} 20 \times 1.5$ | $\mathrm{M} 20 \times 1.5$ | $\mathrm{M} 20 \times 1.5$ |
| Compression fitting | - | - | $\mathrm{G} 1 / 2 \mathrm{~B}$ | - |
| Union nut | - | - | $1 / 2 \mathrm{NPT}$ | - |

## Operating conditions

## Ambient and storage temperature

$-40 \ldots+80^{\circ} \mathrm{C}$
Other ambient and storage temperatures on request

## Certificates (option)

| Certification type | Measurement <br> accuracy | Material <br> certificate |
| :--- | :--- | :--- |
| 2.2 test report | x | x |
| 3.1 inspection certificate | x | x |
| DKD/DAkkS calibration <br> certificate | x | - |

The different certifications can be combined with each other.
For calibration, the measuring insert is removed from the thermometer. The minimum length (metal part of the probe) for carrying out a measurement accuracy test 3.1 or DKD/ DAkkS is 100 mm .
Calibration of shorter lengths on request.
