

## **New high pressure valves available through WIKA**

October 2018

**Lawrenceville, GA** - High pressure valves are being added to the WIKA portfolio of pressure, temperature, level, flow and force measurement.

With the acquisition of SAMI Instruments S.R.L. by the WIKA Group in July 2017, the family owned company is enlarging its corporate portfolio for applications in the field of specialty valves.

WIKA's product and application competence will be supplemented by the experience and know-how of SAMI Valves. The new portfolio of standard and specialty valves available through WIKA USA includes ball valves, needle valves, check valves, and instrument manifold valves with pressures from 15,000 psi to 60,000 psi.

The expanded and more flexible range of tailored application solutions from WIKA allows customers to purchase direct from one source. For more information, or to order valves from WIKA please contact [valves.us@wika.com](mailto:valves.us@wika.com).
