

TLS vibrating level switch: designed for general purpose applications

Klingenberg, July 2024. WIKA has supplemented its portfolio with a vibrating level switch. It is suitable for all liquids, also for highly viscous media.

The new instrument is available in three variants for different market segments. The model TLS-S is intended for the process industry and can also be delivered with ATEX approval. The model TLS-H, thanks to its hygienic design, meets the requirements of the food & pharma sector. The particularly compact model TLS-C has been designed for OEM applications.

The vibrating level switch, due to its functional principle based on a tuning fork as the measuring element, enables precise limit level monitoring in containers and pipelines, irrespective of the mounting position.
