

Intelligent feature: WIKA product passport provides standardised data

Klingenberg, October 2024. WIKA has equipped the majority of its portfolio with a standardised product passport. Users can access product data and technical documents directly via a QR code on the instrument. The QR code is based on an intelligent serial number that uniquely identifies each instrument. The pressure gauges and mechanical thermometers made of stainless steel currently have this intelligent feature. WIKA is a pioneer in the market for dial measuring instruments.

The WIKA product passport contains all the information required for unique and global instrument identification in accordance with the IEC 61406 standard. It makes it even easier to reorder the respective measuring instruments and integrate them into existing systems. This considerably simplifies maintenance and logistics processes.

All other technical documents can also be accessed at any time via the QR code: Data sheets, operating instructions, certificates and approvals. This means that users always have easy access to the information they need, allowing them to utilise their individual instrument data efficiently.

As a member of the Digital Data Chain Consortium (DDCC), an association of more than 50 organisations, WIKA is committed to establishing and implementing universal standards for Industry 4.0.
