**Safety instructions for Ex areas**

Take note of the Ex specific safety instructions for Ex applications. These instructions are attached as documents to each instrument with Ex approval and are part of the operating instructions.

Editing status: 2020-05-12
1 About this document

1.1 Function
This instruction provides all the information you need for mounting, connection and setup as well as important instructions for maintenance, fault rectification, the exchange of parts and the safety of the user. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

1.2 Target group
This operating instructions manual is directed to trained personnel. The contents of this manual must be made available to the qualified personnel and implemented.

1.3 Symbols used
Information, note, tip: This symbol indicates helpful additional information and tips for successful work.
Note: This symbol indicates notes to prevent failures, malfunctions, damage to devices or plants.
Caution: Non-observance of the information marked with this symbol may result in personal injury.
Warning: Non-observance of the information marked with this symbol may result in serious or fatal personal injury.
Danger: Non-observance of the information marked with this symbol results in serious or fatal personal injury.

Ex applications
This symbol indicates special instructions for Ex applications.

List
The dot set in front indicates a list with no implied sequence.

1 Sequence of actions
Numbers set in front indicate successive steps in a procedure.

Battery disposal
This symbol indicates special information about the disposal of batteries and accumulators.
2 For your safety

2.1 Authorised personnel
All operations described in this documentation must be carried out only by trained, qualified personnel authorised by the plant operator. During work on and with the device, the required personal protective equipment must always be worn.

2.2 Appropriate use
The CPT-2x is a pressure transmitter for process pressure and hydrostatic level measurement.
You can find detailed information about the area of application in chapter "Product description".
Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.

2.3 Warning about incorrect use
Inappropriate or incorrect use of this product can give rise to application-specific hazards, e.g. vessel overfill through incorrect mounting or adjustment. Damage to property and persons or environmental contamination can result. Also, the protective characteristics of the instrument can be impaired.

2.4 General safety instructions
This is a state-of-the-art instrument complying with all prevailing regulations and directives. The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for the trouble-free operation of the instrument. When measuring aggressive or corrosive media that can cause a dangerous situation if the instrument malfunctions, the operator has to implement suitable measures to make sure the instrument is functioning properly.
The safety instructions in this operating instructions manual, the national installation standards as well as the valid safety regulations and accident prevention rules must be observed by the user.
For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden. For safety reasons, only the accessory specified by the manufacturer must be used.
To avoid any danger, the safety approval markings and safety tips on the device must also be observed.

2.5 EU conformity
The device fulfils the legal requirements of the applicable EU directives. By affixing the CE marking, we confirm the conformity of the instrument with these directives.
The EU conformity declaration can be found on our homepage. Due to the design of its process fittings, the device does not subject of EU pressure device directive if it is operated at process pressures \( \leq 200 \) bar.

### 2.6 NAMUR recommendations

NAMUR is the automation technology user association in the process industry in Germany. The published NAMUR recommendations are accepted as the standard in field instrumentation.

The device fulfils the requirements of the following NAMUR recommendations:

- NE 21 – Electromagnetic compatibility of equipment
- NE 53 – Compatibility of field devices and display/adjustment components
- NE 107 – Self-monitoring and diagnosis of field devices

For further information see [www.namur.de](http://www.namur.de).

### 2.7 Installation and operation in the USA and Canada

This information is only valid for USA and Canada. Hence the following text is only available in the English language.

Installations in the US shall comply with the relevant requirements of the National Electrical Code (ANSI/NFPA 70).

Installations in Canada shall comply with the relevant requirements of the Canadian Electrical Code.
3 Product description

3.1 Configuration

Scope of delivery

The scope of delivery encompasses:

- Instrument CPT-2x

The further scope of delivery encompasses:

- Documentation
  - Quick setup guide CPT-2x
  - Test certificate for pressure transmitters
  - Instructions for optional instrument features
  - Ex-specific "Safety instructions" (with Ex versions)
  - If necessary, further certificates

Information:
Optional instrument features are also described in this operating instructions manual. The respective scope of delivery results from the order specification.

Scope of this operating instructions

This operating instructions manual applies to the following instrument versions:

- Hardware from 1.0.0
- Software version from 1.2.0

Note:
You can find the hardware and software version of the instrument as follows:

- On the type plate of the electronics module
- In the adjustment menu under "Info"

Type label

The type label contains the most important data for identification and use of the instrument:
3.2 Principle of operation

Application area

CPT-2x is suitable for applications in virtually all industries. It is used for the measurement of the following pressure types.

- Gauge pressure
- Absolute pressure
- Vacuum

Measured products

Measured products are gases, vapours and liquids. Depending on the process fitting and measurement setup, measured products can be also viscous or contain abrasive substances.

Measured variables

The CPT-2x is suitable for the measurement of the following process variables:

- Process pressure
- Level
Measuring system pressure
Sensor element is the measuring cell with robust ceramic diaphragm. The process pressure deflects the ceramic diaphragm and causes a capacitance change in the measuring cell. This capacitance change is converted into an electrical signal and output as measured value via the output signal.

![Configuration of the ceramic measuring cell](image)

1. Process diaphragm
2. Glass joint
3. Base element

The measuring cell is available in two sizes: ø 28 mm and ø 17.5 mm.

Measuring system temperature
Temperature sensors in the ceramic diaphragm and on the ceramic body of the ø 28 mm measuring cell or on the electronics of the ø 17.5 mm measuring cell detect the current process temperature. The temperature value is output via:

- The display and adjustment module
- The current output or the digital signal output

Even extreme jumps in process temperature are immediately detected by the ø 28 mm measuring cell. The values in the ceramic diaphragm are compared with those on the ceramic base body. Within a few measuring cycles, the intelligent sensor electronics compensates for otherwise unavoidable measurement deviations caused by temperature shocks in the range. Depending on the adjusted damping, these cause only slight and brief changes in the output signal.
3 Product description

Pressure types

The measuring cell design depends on the selected pressure type.

**Relative pressure:** the measuring cell is open to the atmosphere. The ambient pressure is detected in the measuring cell and compensated. It thus has no influence on the measured value.

**Absolute pressure:** the measuring cell contains vacuum and is encapsulated. The ambient pressure is not compensated and does hence influence the measured value.

Seal concepts

The following presentations show examples for the installation of the ceramic measuring cell into the process fitting and the different seal concepts.

Recessed installation

The recessed installation is particularly suitable for applications with gases, vapours and clear liquids. The measuring cell seal is positioned laterally as well as in addition in front.

![Fig. 4: Recessed installation of the measuring cell (example: manometer connection G½)](image)

1. Measuring cell
2. Seal for the measuring cell
3. Additional, front seal for measuring cell
4. Diaphragm
5. Process fitting
6. Seal for the process fitting

Front-flush mounting with single seal

The front-flush installation is particularly suitable for applications with viscous and abrasive media and in case of buildup. The measuring cell seal is positioned laterally.
**Completely front-flush mounting with single seal**

The completely front-flush mounting is particularly suitable for applications in the paper industry. The diaphragm is in the pulp flow, is hence cleaned and protected against buildup.

**Front-flush mounting with double seal**

The front-flush installation is particularly suitable for applications with viscous media. The additional, front sealing protects the glass joint of the measuring cell against chemical attack and the measuring cell electronics against diffusion of aggressive gases from the process.
3 Product description

Installation in hygienic fitting

The front-flush, hygienic installation of the measuring cell is particularly suitable for food applications. The sealings are installed gap-free. The form seal of the measuring cell protects also the glass joint.

Fig. 8: Hygienic installation of the measuring cell (example: hygienic fitting with compression nut)

1 Measuring cell
2 Form seal for the measuring cell
3 Gap-free seal for process fitting
4 Process fitting
5 Diaphragm

Installation in hygienic fitting acc. to 3-A

The front-flush, hygienic installation of the measuring cell acc. to 3A is particularly suitable for food applications. The sealings are installed gap-free. The additional front sealing for the measuring cell protects also the glass joint. A hole in the process fitting is used for leakage detection.

Fig. 9: Hygienic installation of the measuring cell acc. to 3-A (example: Clamp connection)

1 Measuring cell
2 Seal for the measuring cell
3 Process fitting
4 Additional, front seal for measuring cell
5 Diaphragm
5 Hole for leakage detection

3.3 Supplementary cleaning procedures

The CPT-2x is also available in the version "Oil, grease and silicone-free". These instruments have passed through a special cleaning procedure to remove oil, grease and paint-wetting impairment substances (PWIS).

The cleaning is carried out on all wetted parts as well as on surfaces accessible from outside. To keep the purity level, the instruments are immediately packed in plastic foil after the cleaning process. The purity level remains as long as the instrument is kept in the closed original packaging.
Caution:
The CPT-2x in this version may not be used in oxygen applications. For this purpose, instruments are available in the special version "Oil, grease and silicone-free for oxygen applications".

3.4 Packaging, transport and storage

Packaging
Your instrument was protected by packaging during transport. Its capacity to handle normal loads during transport is assured by a test based on ISO 4180.

The packaging consists of environment-friendly, recyclable cardboard. For special versions, PE foam or PE foil is also used. Dispose of the packaging material via specialised recycling companies.

Transport
Transport must be carried out in due consideration of the notes on the transport packaging. Nonobservance of these instructions can cause damage to the device.

Transport inspection
The delivery must be checked for completeness and possible transit damage immediately at receipt. Ascertained transit damage or concealed defects must be appropriately dealt with.

Storage
Up to the time of installation, the packages must be left closed and stored according to the orientation and storage markings on the outside.

Unless otherwise indicated, the packages must be stored only under the following conditions:
- Not in the open
- Dry and dust free
- Not exposed to corrosive media
- Protected against solar radiation
- Avoiding mechanical shock and vibration

Storage and transport temperature
- Storage and transport temperature see chapter "Supplement - Technical data - Ambient conditions"
- Relative humidity 20 ... 85 %

Lifting and carrying
With instrument weights of more than 18 kg (39.68 lbs) suitable and approved equipment must be used for lifting and carrying.
4 Mounting

4.1 General instructions

Note:
For safety reasons, the instrument must only be operated within the permissible process conditions. You can find detailed information on the process conditions in chapter "Technical data" of the operating instructions or on the type label.

Hence make sure before mounting that all parts of the instrument exposed to the process are suitable for the existing process conditions.

These are mainly:
- Active measuring component
- Process fitting
- Process seal

Process conditions in particular are:
- Process pressure
- Process temperature
- Chemical properties of the medium
- Abrasion and mechanical influences

Note:
Protect your instrument against moisture ingress through the following measures:
- Use a suitable connection cable (see chapter "Connecting to power supply")
- Tighten the cable gland or plug connector
- Lead the connection cable downward in front of the cable entry or plug connector

This applies mainly to outdoor installations, in areas where high humidity is expected (e.g. through cleaning processes) and on cooled or heated vessels.

Note:
Make sure that the degree of contamination specified in chapter "Technical data" meets the existing ambient conditions.

Note:
Make sure that during installation or maintenance no moisture or dirt can get inside the instrument.

To maintain the housing protection, make sure that the housing lid is closed during operation and locked, if necessary.

Screwing in

Devices with threaded fitting are screwed into the process fitting with a suitable wrench via the hexagon.

See chapter "Dimensions" for wrench size.
Warning:
The housing or the electrical connection may not be used for screwing in! Depending on the device version, tightening can cause damage, e.g. to the rotation mechanism of the housing.

Vibrations
If there is strong vibration at the mounting location, the instrument version with external housing should be used. See chapter "External housing".

Permissible process pressure (MWP) - Device
The permissible process pressure range is specified by "MWP" (Maximum Working Pressure) on the type label, see chapter "Structure". The MWP takes the element of the measuring cell and processing fitting combination with the weakest pressure into consideration and may applied permanently. The specification refers to a reference temperature of +20 °C (+68 °F). It also applies when a measuring cell with a higher measuring range than the permissible pressure range of the process fitting is installed order-related.

In order to prevent damage to the device, a test pressure may only exceed the specified MWP briefly by 1.5 times at reference temperature. The pressure stage of the process fitting as well as the overload resistance of the measuring cell are taken into consideration here (see chapter "Technical Data").

In addition, a temperature derating of the process fitting, e.g. with flanges, can limit the permissible process pressure range according to the respective standard.

Permissible process pressure (MWP) - Mounting accessory
The permissible process pressure range is stated on the type label. The instrument should only be operated with these pressures if the mounting accessory used also fulfils these values. This should be ensured by suitable flanges, welded sockets, tension rings with Clamp connections, sealings, etc.

Temperature limits
Higher process temperatures often mean also higher ambient temperatures. Make sure that the upper temperature limits stated in chapter "Technical data" for the environment of the electronics housing and connection cable are not exceeded.

Fig. 10: Temperature ranges
1 Process temperature
2 Ambient temperature
4.2 Instructions for oxygen applications

Oxygen and other gases can be explosive when brought into contact with oils, grease and plastics, so the following measures must also be taken:

- All components of the system, e.g. measuring instruments, must be cleaned in accordance with the requirements of recognized regulations or standards
- Depending on the seal material, certain temperatures and pressures must not be exceeded in oxygen applications, see chapter "Technical data"

Danger:
Instruments for oxygen applications must be unpacked just before mounting. After removing the protective cover of the process fitting, the label "O₂" will be visible on the process fitting. Penetration of oil, grease and dirt should be avoided. Danger of explosion!

4.3 Ventilation and pressure compensation

Filter element - Position

Fig. 11: Position of the filter element
1 Plastic, stainless steel single chamber (precision casting)
2 Aluminium - single chamber
3 Stainless steel single chamber (electropolished)
4 Plastic double chamber
5 Aluminium - double chamber
6 Filter element

With the following instruments a blind plug is installed instead of the filter element:

- Instruments in protection IP66/IP68 (1 bar) - ventilation via capillar-ies in non-detachable cable
- Instruments with absolute pressure
Filter element - Position Ex-d version

→ Turn the metal ring in such a way that the filter element points downward after installation of the instrument. This provides better protection against buildup.

![Fig. 12: Position of the filter element - Ex-d version](image)

1  Rotatable metal ring  
2  Filter element

Instruments with absolute pressure have a blind plug mounted instead of the filter element.

Filter element - Position Second Line of Defense

The Second Line of Defense (SLOD) is a second level of the process separation in form of a gas-tight leadthrough in the housing neck, preventing products from penetrating into the housing.

With these instruments, the process assembly is completely encapsulated. An absolute pressure measuring cell is used so that no ventilation is required.

With relative pressure measuring ranges, the ambient pressure is detected and compensated by a reference sensor in the electronics.

![Fig. 13: Position of the filter element - gastight leadthrough](image)

1  Filter element  
2  Gas-tight leadthrough
Instruments with absolute pressure have a blind plug mounted instead of the filter element.

### 4.4 Process pressure measurement

Keep the following in mind when setting up the measuring system:
- Mount the instrument above the measuring point

Possible condensation can then drain off into the process line.

---

**Measurement setup in gases**

![Diagram of process pressure measurement setup in gases]

*Fig. 15: Measurement setup for process pressure measurement of gases in pipelines*

1. CPT-2x
2. Blocking valve
3. Pipeline

---

**Measurement setup in vapours**

Keep the following in mind when setting up the measuring system:
- Connect via a siphon
- Do not insulate the siphon
- Fill the siphon with water before setup
A protective accumulation of water is formed through condensation in the pipe bends. Even in applications with hot steam, a medium temperature $< 100 \, ^\circ C$ on the transmitter is ensured.

**Measurement setup in liquids**

Keep the following in mind when setting up the measuring system:

- Mount the instrument below the measuring point

The effective pressure line is always filled with liquid and gas bubbles can bubble up to the process line.
### 4.5 Level measurement

Keep the following in mind when setting up the measuring system:

- Mount the instrument below the min. level
- Do not mount the instrument close to the filling stream or emptying area
- Mount the instrument so that it is protected against pressure shocks from the stirrer

![Fig. 18: Measurement setup for the level measurement](image)

### 4.6 External housing

![Fig. 19: Configuration, process module, external housing](image)

1. Pipeline
2. Process module
3. Connection cable process assembly - External housing
4. External housing
5. Signal cable
5 Connecting to the bus system

5.1 Preparing the connection

Safety instructions
Always keep in mind the following safety instructions:

- Carry out electrical connection by trained, qualified personnel authorised by the plant operator
- If overvoltage surges are expected, overvoltage arresters should be installed

Warning:
Only connect or disconnect in de-energized state.

Voltage supply
The voltage supply is provided by a Profibus DP/PA segment coupler. The voltage supply range can differ depending on the instrument version. You can find the data for voltage supply in chapter "Technical data".

Connection cable
Connection is made with screened cable according to the Profibus specification. Power supply and digital bus signal are carried over the same two-wire connection cable.

Use cable with round cross section for instruments with housing and cable gland. To ensure the seal effect of the cable gland (IP protection rating), find out which cable outer diameter the cable gland is suitable for.

Use a cable gland fitting the cable diameter.

Make sure that the entire installation is carried out according to the Profibus specification. In particular, make sure that the bus is terminated with suitable terminating resistors.

You can find detailed information of the cable specification, installation and topology in the "Profibus PA - User and Installation Guideline" on www.profibus.com.

Cable screening and grounding
Make sure that the cable screen and grounding are carried out according to Fieldbus specification. We recommend to connect the cable screening to ground potential on both ends.

In systems with potential equalisation, connect the cable screening directly to ground potential at the power supply unit, in the connection box and at the sensor. The screen in the sensor must be connected directly to the internal ground terminal. The ground terminal outside on the housing must be connected to the potential equalisation (low impedance).

Cable glands
Metric threads
In the case of instrument housings with metric thread, the cable glands are screwed in at the factory. They are sealed with plastic plugs as transport protection.

Note:
You have to remove these plugs before electrical connection.
5 Connecting to the bus system

NPT thread
In the case of instrument housings with self-sealing NPT threads, it is not possible to have the cable entries screwed in at the factory. The free openings for the cable glands are therefore covered with red dust protection caps as transport protection.

Note:
Prior to setup you have to replace these protective caps with approved cable glands or close the openings with suitable blind plugs.

On plastic housings, the NPT cable gland or the Conduit steel tube must be screwed into the threaded insert without grease.
Max. torque for all housings, see chapter "Technical data".

5.2 Connecting

Connection technology
The voltage supply and signal output are connected via the spring-loaded terminals in the housing.
Connection to the display and adjustment module or to the interface adapter is carried out via contact pins in the housing.

Information:
The terminal block is pluggable and can be removed from the electronics. To do this, lift the terminal block with a small screwdriver and pull it out. When reinserting the terminal block, you should hear it snap in.

Connection procedure
Proceed as follows:
1. Unscrew the housing lid
2. If a display and adjustment module is installed, remove it by turning it slightly to the left
3. Loosen compression nut of the cable gland and remove blind plug
4. Remove approx. 10 cm (4 in) of the cable mantle, strip approx. 1 cm (0.4 in) of insulation from the ends of the individual wires
5. Insert the cable into the sensor through the cable entry

Fig. 20: Connection steps 5 and 6
1 Single chamber housing
2 Double chamber housing
6. Insert the wire ends into the terminals according to the wiring plan
5 Connecting to the bus system

**Note:**
Solid cores as well as flexible cores with wire end sleeves are inserted directly into the terminal openings. In case of flexible cores without end sleeves, press the terminal from above with a small screwdriver, the terminal opening is then free. When the screwdriver is released, the terminal closes again.

7. Check the hold of the wires in the terminals by lightly pulling on them
8. Connect the shielding to the internal ground terminal, connect the external ground terminal to potential equalisation
9. Tighten the compression nut of the cable entry gland. The seal ring must completely encircle the cable
10. Reinsert the display and adjustment module, if one was installed
11. Screw the housing lid back on

The electrical connection is finished.

5.3 Single chamber housing

The following illustration applies to the non-Ex, Ex-ia and Ex-d version.

![Diagram of Electronics and connection compartment - single chamber housing](image)

**Fig. 21: Electronics and connection compartment - single chamber housing**

1. Voltage supply, signal output
2. For display and adjustment module or interface adapter
3. Selection switch for instrument address
4. For external display and adjustment unit
5. Ground terminal for connection of the cable screening

5.4 Double chamber housing

The following illustrations apply to the non-Ex as well as to the Ex-ia version.
5 Connecting to the bus system

Electronics compartment

![Electronics compartment - double chamber housing](image1)

*Fig. 22: Electronics compartment - double chamber housing*

1. Internal connection to the connection compartment
2. Contact pins for the display and adjustment module or interface adapter
3. Selection switch for bus address

Connection compartment

![Connection compartment - double chamber housing](image2)

*Fig. 23: Connection compartment - double chamber housing*

1. Voltage supply, signal output
2. For display and adjustment module or interface adapter
3. For external display and adjustment unit
4. Ground terminal for connection of the cable screening

Wire assignment, connection cable

![Wire assignment in permanently connected connection cable](image3)

*Fig. 24: Wire assignment in permanently connected connection cable*

1. Brown (+) and blue (-) to power supply or to the processing system
2. Shielding

5.5 Housing IP66/IP68 (1 bar)
5.6 External housing with version IP68 (25 bar)

Overview

Fig. 25: CPT-2x in IP68 version 25 bar with axial cable outlet, external housing
1 Transmitter
2 Connection cable
3 External housing

Electronics and connection compartment for power supply

Fig. 26: Electronics and connection compartment
1 Electronics module
2 Cable gland for voltage supply
3 Cable gland for connection cable, transmitter
5 Connecting to the bus system

Terminal compartment, housing socket

Fig. 27: Connection of the process component in the housing base

1 Yellow
2 White
3 Red
4 Black
5 Shielding
6 Breather capillaries

Electronics and connection compartment

Fig. 28: Electronics and connection compartment - single chamber housing

1 Voltage supply, signal output
2 For display and adjustment module or interface adapter
3 Selection switch for instrument address
4 For external display and adjustment unit
5 Ground terminal for connection of the cable screening

5.7 Switch-on phase

After connecting the instrument to power supply or after a voltage recurrence, the instrument carries out a self-check:

- Internal check of the electronics
- Indication of a status message on the display or PC
5 Connecting to the bus system

Then the actual measured value is output to the signal cable. The value takes into account settings that have already been carried out, e.g. default setting.
6 Set up with the display and adjustment module

6.1 Insert display and adjustment module

The display and adjustment module can be inserted into the sensor and removed again at any time. You can choose any one of four different positions - each displaced by 90°. It is not necessary to interrupt the power supply.

Proceed as follows:

1. Unscrew the housing lid
2. Place the display and adjustment module on the electronics in the desired position and turn it to the right until it snaps in.
3. Screw housing lid with inspection window tightly back on

Disassembly is carried out in reverse order.

The display and adjustment module is powered by the sensor, an additional connection is not necessary.

Fig. 29: Installing the display and adjustment module in the electronics compartment of the single chamber housing
Set up with the display and adjustment module

Fig. 30: Installing the display and adjustment module in the double chamber housing

1 In the electronics compartment
2 In the connection compartment

Note:
If you intend to retrofit the instrument with a display and adjustment module for continuous measured value indication, a higher lid with an inspection glass is required.

6.2 Adjustment system

Fig. 31: Display and adjustment elements

1 LC display
2 Adjustment keys

Key functions

- [OK] key:
  - Move to the menu overview
  - Confirm selected menu
  - Edit parameter
  - Save value

- [->] key:
  - Change measured value presentation
  - Select list entry
  - Select menu items
6 Set up with the display and adjustment module

- Select editing position

- \([+]\) key:
  - Change value of the parameter

- \([ESC]\) key:
  - Interrupt input
  - Jump to next higher menu

Adjustment system

The instrument is operated via the four keys of the display and adjustment module. The individual menu items are shown on the LC display. You can find the function of the individual keys in the previous illustration.

Time functions

When the \([+]\) and \([-\rightarrow]\) keys are pressed quickly, the edited value, or the cursor, changes one value or position at a time. If the key is pressed longer than 1 s, the value or position changes continuously.

When the \([OK]\) and \([ESC]\) keys are pressed simultaneously for more than 5 s, the display returns to the main menu. The menu language is then switched over to "English".

Approx. 60 minutes after the last pressing of a key, an automatic reset to measured value indication is triggered. Any values not confirmed with \([OK]\) will not be saved.

6.3 Measured value indication

With the \([-\rightarrow]\) key you can move between three different indication modes.

In the first view, the selected measured value is displayed in large digits.

In the second view, the selected measured value and a corresponding bargraph presentation are displayed.

In the third view, the selected measured value as well as a second selectable value, e.g. the temperature, are displayed.

| Sensor | 50.0 % | 50.0 % | Sensor | 50.0 % | 23.1 °C |

With the "OK" key you move (during the initial setup of the instrument) to the selection menu "Language".

Selection language

In this menu item, you can select the national language for further parameterization.

Language

Deutsch
English
Français
Español
Pushto

With the "[-\rightarrow]\) button, you can select the requested language, with "OK" you confirm the selection and move to the main menu.
You can change your selection afterwards with the menu item "Setup - Display, Menu language".

6.4 Parameter adjustment - Quick setup
To quickly and easily adapt the sensor to the application, select the menu item "Quick setup" in the start graphic on the display and adjustment module.

Select the individual steps with the [->] key.
After the last step, "Quick setup terminated successfully" is displayed briefly.
The return to the measured value indication is carried out through the [->] or [ESC] keys or automatically after 3 s

Note:
you can find a description of the individual steps in the quick setup guide of the sensor.
you can find "Extended adjustment" in the next sub-chapter.

6.5 Parameter adjustment - Extended adjustment
For technically demanding measuring points, you can carry out extended settings in "Extended adjustment".

Main menu
The main menu is divided into five sections with the following functions:

Setup: Settings, for example, to measurement loop name, application, units, position correction, adjustment, AI FB 1 Channel - scaling - damping
Display: Settings, e.g., for language, measured value display, lighting
Diagnosis: Information, e.g. on instrument status, pointer, measurement reliability, AI FB 1 simulation
Additional adjustments: PIN, date/time, reset, copy function
Info: Instrument name, hardware and software version, date of manufacture, sensor features
To ensure optimum adjustment of the measurement, the individual submenu items in the main menu "Setup" should be selected one
after the other and provided with the correct parameters. The menu items are described in the following.

6.5.1 Setup

**Instrument address**
An address must be assigned to each Profibus PA instrument. Each address may only be assigned once in the Profibus PA network. The sensor is only recognized by the control system if the address is set correctly.

When the instrument is shipped, address 126 is set. This address can be used to test the function of the instrument and to connect it to a Profibus PA network. Then the address must be changed to integrate additional instruments.

The address setting is carried out either via:
- The address selection switch in the electronics compartment of the instrument (address setting via hardware)
- The display and adjustment module (address setting via software)
- PACTware/DTM (address setting via software)

**Hardware addressing**
Hardware addressing is effective if an address less than 126 is set with the address selection switches on the electronics module of CPT-2x. In such case, software addressing has no effect - only the set hardware address applies.

**Software addressing**
Software addressing is only effective if address 126 or higher is set on the instrument with the address selection switches.

**Measurement loop name**
In the menu item "Sensor TAG" you edit a twelve-digit measurement loop designation.

You can enter an unambiguous designation for the sensor, e.g. the measurement loop name or the tank or product designation. In digital systems and in the documentation of larger plants, a singular designation must be entered for exact identification of individual measuring points.

The available digits include:
- Letters from A … Z
- Numbers from 0 … 9
- Special characters +, -, /, -

**Application**
In this menu item you activate/deactivate the slave sensor for electronic differential pressure and select the application.
CPT-2x can be used for process pressure and level measurement. Default setting is process pressure measurement. The mode can be changed in this adjustment menu.

If you have connected no slave sensor, you confirm this with “Deactivate”.

Depending on the selected application, different subchapters in the following adjustment steps are important. There you can find the individual adjustment steps.

Enter the requested parameters via the appropriate keys, save your settings with [OK] and jump to the next menu item with the [ESC] and the [->] key.

### Units

In this menu item, the adjustment units of the instrument are determined. The selection determines the unit displayed in the menu items "Min. adjustment (Zero)" and "Max. adjustment (Span)".

**Unit of measurement:**

<table>
<thead>
<tr>
<th>Units of measurement</th>
<th>Units of measurement</th>
<th>Units of measurement</th>
</tr>
</thead>
<tbody>
<tr>
<td>m</td>
<td>mbar</td>
<td>ft</td>
</tr>
<tr>
<td>°C</td>
<td>°C</td>
<td>°F</td>
</tr>
</tbody>
</table>

If the level should be adjusted in a height unit, the density of the medium must also be entered later during the adjustment.

In addition, the temperature unit of the instrument is specified. The selection determines the unit displayed in menu items "Peak value, temperature" and "in the variables of the digital output signal".

**Temperature unit:**

Enter the requested parameters via the appropriate keys, save your settings with [OK] and jump to the next menu item with the [ESC] and the [->] key.

### Position correction

Especially with chemical seal systems, the installation position of the instrument can shift (offset) the measured value. Position correction compensates this offset. In the process, the actual measured value is taken over automatically. With relative pressure measuring cells a manual offset can also be carried out.
6 Set up with the display and adjustment module

If the actual measured value should be taken over as correction value during automatic position correction, this value must not be influenced by product coverage or static pressure.

With the manual position correction, the offset value can be determined by the user. Select for this purpose the function "Edit" and enter the requested value.

Save your settings with [OK] and move with [ESC] and [->] to the next menu item.

After the position correction is carried out, the actual measured value is corrected to 0. The corrective value appears with an inverse sign as offset value in the display.

The position correction can be repeated as often as necessary. However, if the sum of the corrective values exceeds 20 % of the nominal measuring range, then no position correction is possible.

Adjustment

CPT-2x always measures pressure independently of the process variable selected in the menu item "Application". To output the selected process variable correctly, an allocation of the output signal to 0 % and 100 % must be carried out (adjustment).

With the application "Level", the hydrostatic pressure, e.g. with full and empty vessel, is entered for adjustment. See following example:

![Diagram](image)

**Fig. 32: Parameter adjustment example "Min./max. adjustment, level measurement"**

1. Min. level = 0 % corresponds to 0.0 mbar
2. Max. level = 100 % corresponds to 490.5 mbar

If these values are not known, an adjustment with filling levels of e.g. 10 % and 90 % is also possible. By means of these settings, the real filling height is then calculated.

The actual product level during this adjustment is not important, because the min./max. adjustment is always carried out without changing the product level. These settings can be made ahead of time without the instrument having to be installed.
6 Set up with the display and adjustment module

Note:
If the adjustment ranges are exceeded, the entered value will not be accepted. Editing can be interrupted with [ESC] or corrected to a value within the adjustment ranges.

For the other process variables such as e.g. process pressure, differential pressure or flow, the adjustment is performed in like manner.

Zero adjustment

Proceed as follows:
1. Select the menu item "Setup" with [->] and confirm with [OK].
   Now select with [->] the menu item "Zero adjustment" and confirm with [OK].

2. Edit the mbar value with [OK] and set the cursor to the requested position with [->].

3. Set the requested mbar value with [+] and store with [OK].
4. Go with [ESC] and [->] to the span adjustment.
   The zero adjustment is finished.

Information:
The Zero adjustment shifts the value of the span adjustment. The span, i.e. the difference between these values, however, remains unchanged.

For an adjustment with pressure, simply enter the actual measured value indicated at the bottom of the display.

If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].

Span adjustment

Proceed as follows:
1. Select with [->] the menu item Span adjustment and confirm with [OK].

2. Edit the mbar value with [OK] and set the cursor to the requested position with [->].
3. Set the requested mbar value with [+] and store with [OK].
For an adjustment with pressure, simply enter the actual measured value indicated at the bottom of the display.
If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].
The span adjustment is finished.

**Min. adjustment level**

Proceed as follows:
1. Select the menu item "Setup" with [->] and confirm with [OK].
   Now select with [->] the menu item "Adjustment", then "Min. adjustment" and confirm with [OK].
2. Edit the percentage value with [OK] and set the cursor to the requested position with [->].
3. Set the requested percentage value (e.g. 10 %) with [+] and save with [OK]. The cursor jumps now to the pressure value.
4. Enter the pressure value corresponding to the min. level (e.g. 0 mbar).
5. Save settings with [OK] and move with [ESC] and [->] to the max. adjustment.
The min. adjustment is finished.
For an adjustment with filling, simply enter the actual measured value indicated at the bottom of the display.

**Max. adjustment level**

Proceed as follows:
1. Select with [->] the menu item Max. adjustment and confirm with [OK].
2. Edit the percentage value with [OK] and set the cursor to the requested position with [->].
3. Set the requested percentage value (e.g. 90 %) with [+] and save with [OK]. The cursor jumps now to the pressure value.
4. Enter the pressure value for the full vessel (e.g. 900 mbar) corresponding to the percentage value.
5. Save settings with [OK]
The max. adjustment is finished.
For an adjustment with filling, simply enter the actual measured value indicated at the bottom of the display.
Linearisation

A linearization is necessary for all vessels in which the vessel volume does not increase linearly with the level - e.g. a horizontal cylindrical or spherical tank - and the indication or output of the volume is required. Corresponding linearization curves are preprogrammed for these vessels. They represent the correlation between the level percentage and vessel volume. The linearization applies to the measured value indication and the current output.

AI FB1

Since the parameter adjustment of the Function Block 1 (FB1) is very comprehensive, it was divided into various submenu items.

AI FB1 - Channel

In menu item "Channel" you determine the input signal for further processing in AI FB1.

As input signals, the output values of Transducer Block (TB) can be selected.

AI FB1 - scaling unit

In the menu item "Scaling unit" you define the scaling variable and scaling unit of the output value of FB1.

AI FB1 - scaling

In the menu item "Scaling", you assign the min. and max. values of the input signal (Channel) to the respective values of the output (Out Scale). The units correspond to the previous selection.

Min. values for PV lin Proc. and Out Scale process pressure in bar:

Max. values for PV lin Proc. and Out Scale process pressure in bar:
6 Set up with the display and adjustment module

**AI FB1 - damping**

To damp process-dependent measured value fluctuations, you can set a time of 0 ... 999 s in this menu item.

The damping applies to the level and interface measurement.

The default setting is a damping of 0 s.

**Lock/Unlock adjustment**

In the menu item "Lock/unlock adjustment" you safeguard the sensor parameters against unauthorized or unintentional modifications.

With active PIN, only the following adjustment functions are possible without entering a PIN:

- Select menu items and show data
- Read data from the sensor into the display and adjustment module

Releasing the sensor adjustment is also possible in any menu item by entering the PIN.

**Caution:**

With active PIN, adjustment via PACTware/DTM and other systems is also blocked.

**6.5.2 Display**

This menu item enables the setting of the requested national language.

The following languages are available:

- German
- English
- French
- Spanish
- Russian
- Italian
- Dutch
- Portuguese
- Japanese
- Chinese
6 Set up with the display and adjustment module

- Polish
- Czech
- Turkish

In delivery status, the CPT-2x is set to English.

### Display value 1 and 2

In this menu item, you define which measured value is displayed.

- Polish
- Czech
- Turkish

In this menu item, you define which measured value is displayed.

The default setting for the display value is "Lin. percent".

### Display format 1 and 2

In this menu item you define the number of decimal positions with which the measured value is displayed.

The default setting for the display format is "Automatic".

### Backlight

The display and adjustment module has a backlight for the display.

In this menu item you can switch on the lighting. You can find the required operating voltage in chapter "Technical data".

### Sensor status

In this menu item, the device status is displayed.

In case of error, e.g. the error code F017, e.g. the error description "Adjustment span too small" and a four digit figure are displayed for service purposes. You can find the error codes with description, reason as well as rectification in chapter "Asset Management".

### 6.5.3 Diagnostics

The respective min. and max. measured values are saved in the sensor. The two values are displayed in menu item "Peak values, pressure".

In another window you can carry out a reset of the peak values separately.
6 Set up with the display and adjustment module

**Peak value, temperature**

The respective min. and max. measured values of the measuring cell and the electronics temperature are stored in the sensor. In menu item "Peak value, temperature", both values are displayed.

In another window you can carry out a reset of the two peak values separately.

**Simulation**

In this menu item you simulate measured values. Hence, the signal path can be tested via the bus system to the input card of the control system.

Select the requested simulation variable and set the requested value.

To deactivate the simulation, you have to push the [ESC] key and confirm the message "Deactivate simulation" with the [OK] key.

**Caution:**
During simulation, the simulated value is output as digital signal. The status message along with the Asset Management function is "Maintenance".

**Information:**
The sensor terminates the simulation automatically after 60 minutes.

### 6.5.4 Additional adjustments

**Date/Time**

In this menu item, you adjust the internal clock of the sensor. There is no adjustment for summer/winter (daylight saving) time.

**Reset**

After a reset, certain parameter adjustments made by the user are reset.
The following reset functions are available:

**Delivery status:** Restores the parameter settings at the time of shipment from the factory, incl. the order-specific settings. Any user-defined linearisation curve as well as the measured value memory are deleted.

**Basic settings:** Resets the parameter settings, incl. special parameters, to the default values of the respective instrument. Any programmed linearisation curve as well as the measured value memory are deleted.

The following table shows the default values of the instrument. Depending on the instrument version or application, all menu items may not be available or some may be differently assigned:

--- | --- | --- |
PIN | 0000 | |
Date/Time | Actual date/Actual time | |
Copy instrument settings | | |
Special parameters | No reset | |
Scaling | Scaling size | Volume in l  
Scaling format | 0 % corresponds to 0 l  
100 % corresponds to 0 l |

### Copy instrument settings

The instrument settings are copied with this function. The following functions are available:

- **Read from sensor**: Read data from sensor and store into the display and adjustment module
- **Write into sensor**: Store data from the display and adjustment module back into the sensor

The following data or settings for adjustment of the display and adjustment module are saved:

- All data of the menu "Setup" and "Display"
- In the menu "Additional adjustments" the items "Reset, Date/Time"
- The user-programmable linearization curve

The copied data are permanently saved in an EEPROM memory in the display and adjustment module and remain there even in case of
power failure. From there, they can be written into one or more sensors or kept as backup for a possible electronics exchange.

**Note:**
Before the data are saved in the sensor, a safety check is carried out to determine if the data match the sensor. In the process the sensor type of the source data as well as the target sensor are displayed. If the data do not match, a fault message is outputted or the function is blocked. The data are saved only after release.

### Special parameters

In this menu item you gain access to the protected area where you can enter special parameters. In exceptional cases, individual parameters can be modified in order to adapt the sensor to special requirements.

Change the settings of the special parameters only after having contacted our service staff.

### 6.5.5 Info

#### Device name

In this menu item, you can read out the instrument name and the instrument serial number:

#### Instrument version

In this menu item, the hardware and software version of the sensor is displayed.

#### Factory calibration date

In this menu item, the date of factory calibration of the sensor as well as the date of the last change of sensor parameters are displayed via the display and adjustment module or via the PC.

#### Profibus ident number

In this menu item, the Profibus ident number of the sensor is displayed.
6 Set up with the display and adjustment module

Sensor characteristics

In this menu item, the features of the sensor such as approval, process fitting, seal, measuring range, electronics, housing and others are displayed.

<table>
<thead>

</tbody>
</table>

6.6 Saving the parameterisation data

On paper

We recommended writing down the adjustment data, e.g. in this operating instructions manual, and archiving them afterwards. They are thus available for multiple use or service purposes.

In the display and adjustment module

If the instrument is equipped with a display and adjustment module, the parameter adjustment data can be saved therein. The procedure is described in menu item "Copy device settings".
7 Diagnosis, asset management and service

7.1 Maintenance

If the device is used properly, no special maintenance is required in normal operation.

Precaution measures against buildup

In some applications, product buildup on the diaphragm can influence the measuring result. Depending on the sensor and application, take precautions to ensure that heavy buildup, and especially a hardening thereof, is avoided.

Cleaning

The cleaning helps that the type label and markings on the instrument are visible.

Take note of the following:

- Use only cleaning agents which do not corrode the housings, type label and seals
- Use only cleaning methods corresponding to the housing protection rating

7.2 Cleaning - hygienic connection with compression nut

Overview

The hygienic connection with compression nut can be disassembled and the diaphragm cleaned.

The following graphic shows the structure:

![Diagram of the hygienic connection with compression nut]

Fig. 33: CPT-2x, structure of the hygienic connection with compression nut

1 Hexagon
2 Compression nut
3 Process fitting
4 Process module
5 Form seal for the measuring cell
6 O-ring seal for the process fitting
7 Diaphragm

Procedure

To do so, proceed as follows:

1. Loosen compression nut and remove the pressure transmitter from the welded socket
2. Remove the O-ring seal for the process fitting
3. Clean the diaphragm with brass brush and cleaning detergent
4. Loosen the hexagon and remove the process component from the process fitting
5. Remove the form seal for the measuring cell and remove it by a new one.

6. Screw the process component into the process fitting, tighten the hexagon (wrench size see chapter "Dimensions", max. torque see chapter "Technical data").

7. Insert new O-ring seal for the process fitting.

8. Install the process pressure transmitter in the welded socket, tighten compression nut.

The cleaning is finished.
The pressure transmitter is directly ready for operation, a fresh adjustment is not required.

### 7.3 Diagnosis memory

The instrument has several memories available for diagnostic purposes. The data remain there even in case of voltage interruption.

#### Measured value memory

Up to 100,000 measured values can be stored in the sensor in a ring memory. Each entry contains date/time as well as the respective measured value.

Depending on the instrument version, values that can be stored are for example:

- Level
- Process pressure
- Differential pressure
- Static pressure
- Percentage value
- Scaled values
- Current output
- Lin. percent
- Measuring cell temperature
- Electronics temperature

When the instrument is shipped, the measured value memory is active and stores pressure value and measuring cell temperature every 10 s, with electronic differential pressure also the static pressure.

The requested values and recording conditions are set via a PC with PACTware/DTM or the control system with EDD. Data are thus read out and also reset.

#### Event memory

Up to 500 events are automatically stored with a time stamp in the sensor (non-deletable). Each entry contains date/time, event type, event description and value. Event types are for example:

- Modification of a parameter
- Switch-on and switch-off times
- Status messages (according to NE 107)
- Error messages (according to NE 107)

The data are read out via a PC with PACTware/DTM or the control system with EDD.
### 7.4 Asset Management function

The instrument features self-monitoring and diagnostics according to NE 107 and VDI/VDE 2650. In addition to the status messages in the following tables there are more detailed error messages available under the menu item "Diagnostics" via the respective adjustment module.

#### Status messages

The status messages are divided into the following categories:

- **Failure**
- **Function check**
- **Out of specification**
- **Maintenance required**

and explained by pictographs:

Fig. 34: Pictographs of the status messages

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Failure - red</td>
</tr>
<tr>
<td>2</td>
<td>Out of specification - yellow</td>
</tr>
<tr>
<td>3</td>
<td>Function check - orange</td>
</tr>
<tr>
<td>4</td>
<td>Maintenance required - blue</td>
</tr>
</tbody>
</table>

**Failure:** Due to a malfunction in the instrument, a fault message is output.

This status message is always active. It cannot be deactivated by the user.

**Function check:** The instrument is being worked on, the measured value is temporarily invalid (for example during simulation).

This status message is inactive by default.

**Out of specification:** The measured value is unreliable because an instrument specification was exceeded (e.g. electronics temperature).

This status message is inactive by default.

**Maintenance required:** Due to external influences, the instrument function is limited. The measurement is affected, but the measured value is still valid. Plan in maintenance for the instrument because a failure is expected in the near future (e.g. due to buildup).

This status message is inactive by default.

### Reaction when malfunction occurs

The operator of the system is responsible for taking suitable measures to rectify faults.

### Fault rectification

The first measures are:
7 Diagnosis, asset management and service

- Evaluation of fault messages
- Checking the output signal
- Treatment of measurement errors

Further comprehensive diagnostics options are available with a PC/notebook with PACTware and the suitable DTM. In many cases, the reasons can be determined in this way and faults rectified.

**Reaction after fault rectification**

Depending on the reason for the fault and the measures taken, the steps described in chapter "Setup" must be carried out again or must be checked for plausibility and completeness.

### 7.6 Exchange process module on version IP68 (25 bar)

On version IP68 (25 bar), the user can exchange the process module on site. Connection cable and external housing can be kept.

Required tools:
- Hexagon key wrench, size 2

**Caution:**

The exchange may only be carried out in the complete absence of line voltage.

In Ex applications, only a replacement part with appropriate Ex approval may be used.

**Caution:**

During exchange, protect the inner side of the parts against contamination and moisture.

Proceed as follows when carrying out the exchange:

1. Losen the fixing screw with the hexagon key wrench
2. Carefully detach the cable assembly from the process module

![Diagram of CPT-2x in IP68 version, 25 bar and lateral cable outlet, external housing](image)

**Fig. 35: CPT-2x in IP68 version, 25 bar and lateral cable outlet, external housing**

1. Process module
2. Plug connector
3. Fixing screw
4. Cable assembly
5. Connection cable
6. External housing
3. Loosen the plug connector
4. Mount the new process module on the measuring point
5. Plug the connector back in
6. Mount the cable assembly on the process module and turn it to the desired position
7. Tighten the fixing screw with the hexagon key wrench
   The exchange is finished.

7.7 Instrument repair
You can find information for a return shipment under "Service" on our local website.
If a repair is necessary, please proceed as follows:
- Complete one form for each instrument
- If necessary, state a contamination
- Clean the instrument and pack it damage-proof
- Attach the completed form and possibly also a safety data sheet to the instrument
8 Dismount

8.1 Dismounting steps

Warning:
Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel or pipeline, high temperatures, corrosive or toxic media etc.

Take note of chapters "Mounting" and "Connecting to voltage supply" and carry out the listed steps in reverse order.

8.2 Disposal

The instrument consists of materials which can be recycled by specialised recycling companies. We use recyclable materials and have designed the electronics to be easily separable.

WEEE directive
The instrument does not fall in the scope of the EU WEEE directive. Article 2 of this Directive exempts electrical and electronic equipment from this requirement if it is part of another instrument that does not fall in the scope of the Directive. These include stationary industrial plants.

Pass the instrument directly on to a specialised recycling company and do not use the municipal collecting points.

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.
9 Supplement

9.1 Technical data

Note for approved instruments

The technical data in the respective safety instructions which are included in delivery are valid for approved instruments (e.g. with Ex approval). These data can differ from the data listed herein, for example regarding the process conditions or the voltage supply.

All approval documents can be downloaded from our homepage.

Materials and weights

Materials, wetted parts

Process fitting 316L, PVDF, Alloy C22 (2.4602), Alloy C276 (2.4819), Duplex steel (1.4462), Titanium Grade 2

Diaphragm Sapphire-ceramic® (> 99.9 % Al₂O₃ ceramic)

Joining material measuring cell Glass (with double and form seal, non-wetted parts)

Measuring cell seal

- Standard (O-ring seal) FKM (VP2/A, A+P 70.16), EPDM (A+P 70.10-02), FFKM (Kalrez 6375, Perlast G75S, Perlast G75B)

- Hygienic fitting with compression nut (form seal) FKM (ET 6067), EPDM (EPDM 7076), FFKM (Chemraz 535), FEPM (Fluoraz SD890)

Seal for process fitting (in the scope of delivery)

- Thread G½ (EN 837), G1½ (DIN 3852-A) Klingersil C-4400

- Thread M44 x 1.25 (DIN 13), M30 x 1.5 FKM, FFKM, EPDM

- Hygienic connection with compression nut FKM, EPDM, FFKM, FEPM

Surface quality, hygienic fittings, typ.

- Process fitting Rₐ < 0.8 µm

- Diaphragm Rₐ < 0.5 µm

Materials, non-wetted parts

Sensor housing Plastic PBT (Polyester), Aluminium AlSi10Mg (powder-coated, basis: Polyester), 316L

- Housing PA, stainless steel, brass

- Cable gland NBR, PA

- Seal, housing lid Silicone SI 850 R, NBR silicone-free

- Inspection window housing cover Polycarbonate (UL-746-C listed), glass¹)

- Ground terminal 316L

External housing - deviating materials

- Housing and socket Plastic PBT (Polyester), 316L

¹) Glass with Aluminium and stainless steel precision casting housing
- Socket seal
- Seal below wall mounting plate
- Inspection window housing cover
- Ground terminal
- Connection cable with IP68 (25 bar)
  - Cable cover
  - Type label support on cable
- Connection cable with IP68 (1 bar)

**Weights**

| Total weight CPT-2x | approx. 0.8 … 8 kg (1.764 … 17.64 lbs), depending on process fitting and housing |

**Torques**

## Adjustment ranges

Specifications refer to the nominal measuring range, pressure values lower than -1 bar cannot be set.

Min./Max. adjustment:

- Percentage value: -10 … 110 %
9 Supplement

- Pressure value: -20 … 120 %

Zero/Span adjustment:
- Zero: -20 … +95 %
- Span: -120 … +120 %
- Difference between zero and span: max. 120 % of the nominal range

Max. permissible Turn Down: Unlimited (recommended 20 : 1)

### Switch-on phase

Start-up time with operating voltage $U_B$
- $\geq 12$ V DC: $\leq 9$ s
- $< 12$ V DC: $\leq 22$ s

### Output variable

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output signal</td>
<td>digital output signal, Profibus protocol</td>
</tr>
<tr>
<td>Transmission rate</td>
<td>31.25 Kbit/s</td>
</tr>
<tr>
<td>Instrument address</td>
<td>126 (default setting)</td>
</tr>
<tr>
<td>Damping (63 % of the input variable)</td>
<td>0 … 999 s, adjustable</td>
</tr>
<tr>
<td>Profibus PA profile</td>
<td>3.02</td>
</tr>
<tr>
<td>Number of FBs with AI (function blocks with analogue input)</td>
<td>3</td>
</tr>
</tbody>
</table>

**Default values**

- 1. FB: Primary Value (pressure linearized in %)
- 2. FB: Secondary Value 1 (pressure)
- 3. FB: Secondary Value 2 (pressure in %)

**Current value**

- Non-Ex, Ex-ia and Ex-d instruments: 12 mA, ±0.5 mA

**Dynamic behaviour output**

Dynamic characteristics depending on medium and temperature
### Behaviour in case of sudden change of the process variable

- $t_T$: dead time
- $t_A$: rise time
- $t_S$: jump response time

1. Process variable
2. Output signal

<table>
<thead>
<tr>
<th></th>
<th>CPT-2x</th>
<th>CPT-2x - IP68 (25 bar)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dead time</td>
<td>$\leq 25$ ms</td>
<td>$\leq 50$ ms</td>
</tr>
<tr>
<td>Rise time (10 ... 90 %)</td>
<td>$\leq 55$ ms</td>
<td>$\leq 150$ ms</td>
</tr>
<tr>
<td>Step response time (ti: 0 s, 10 ... 90 %)</td>
<td>$\leq 80$ ms</td>
<td>$\leq 200$ ms</td>
</tr>
</tbody>
</table>

Damping (63 % of the input variable) $0 \ldots 999$ s, adjustable via menu item "Damping"

### Additional output parameter - Measuring cell temperature

- **Range**: -60 ... +150 °C (-76 ... +302 °F)
- **Resolution**: $< 0.2$ K
- **Deviation**
  - Range of 0 ... +100 °C (+32 ... +212 °F) $\pm 2$ K
  - Range of -60 ... 0 °C (-76 ... +32 °F) and +100 ... +150 °C (+212 ... +302 °F) typ. $\pm 4$ K

**Output of the temperature values**
- **Indication**: Via the display and adjustment module
- **Analogue**: Via the current output, the additional current output
- **Digital**: Via the digital output signal (depending on the electronics version)

### Reference conditions and influencing variables (according to DIN EN 60770-1)

**Reference conditions according to DIN EN 61298-1**
- **Temperature**: +15 ... +25 °C (+59 ... +77 °F)
- **Relative humidity**: 45 ... 75 %
- **Air pressure**: 860 ... 1060 mbar/86 ... 106 kPa (12.5 ... 15.4 psig)
Determination of characteristics  Limit point adjustment according to IEC 61298-2
Characteristic curve  Linear
Reference installation position  upright, diaphragm points downward
Influence of the installation position  < 0.2 mbar/20 Pa (0.003 psig)

Deviation (according to IEC 60770-1)
Specifications refer to the set span. Turn down (TD) is the ratio: nominal measuring range/set span.

<table>
<thead>
<tr>
<th>Accuracy class</th>
<th>Non-linearity, hysteresis and repeatability with TD 1 : 1 up to 5 : 1</th>
<th>Non-linearity, hysteresis and repeatability with 5 : 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.05 %</td>
<td>&lt; 0.05 %</td>
<td>&lt; 0.01 % x TD</td>
</tr>
<tr>
<td>0.1 %</td>
<td>&lt; 0.1 %</td>
<td>&lt; 0.02 % x TD</td>
</tr>
<tr>
<td>0.2 %</td>
<td>&lt; 0.2 %</td>
<td>&lt; 0.04 % x TD</td>
</tr>
</tbody>
</table>

Influence of the product temperature

Thermal change zero signal and output span through product temperature

Applies to the digital signal output (HART, Profibus PA, Foundation Fieldbus) as well as to the analogue current output 4 ... 20 mA and refers to the set span. Turn down (TD) is the ratio "nominal measuring range/set span".

The thermal change of the zero signal and output span corresponds to the temperature error \( F_T \) in chapter "Calculation of the total deviation (according to DIN 16086)".

Basic temperature error \( F_T \)

![Fig. 37: Basic temperature error \( F_{T\text{basis}} \) at TD 1 : 1](image)

The basic temperature error in % from the above graphic can increase due to the additional factors, depending on the measuring cell version (factor FMZ) and the Turn Down (factor FTD). The additional factors are listed in the following tables.

Additional factor through measuring cell version

<table>
<thead>
<tr>
<th>Measuring cell version</th>
<th>Measuring cell standard, depending on the accuracy class</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.05 %, 0.1 %</td>
<td>0.2 % (with measuring range 0.1 bar_{abs})</td>
</tr>
<tr>
<td>0.2 %</td>
<td>0.2 % (with measuring range 25 mbar)</td>
</tr>
</tbody>
</table>

Factor FMZ

<table>
<thead>
<tr>
<th>Measuring cell version</th>
<th>Factor FMZ</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.05 %, 0.1 %</td>
<td>1</td>
</tr>
<tr>
<td>0.2 %</td>
<td>2</td>
</tr>
<tr>
<td>0.2 %</td>
<td>3</td>
</tr>
</tbody>
</table>
Additional factor through Turn Down

The additional factor FTD through Turn down is calculated according to the following formula:

\[ F_{TD} = 0.5 \times TD + 0.5 \]

In the table, example values for typical Turn downs are listed.

<table>
<thead>
<tr>
<th>Turn Down</th>
<th>TD 1 : 1</th>
<th>TD 2.5 : 1</th>
<th>TD 5 : 1</th>
<th>TD 10 : 1</th>
<th>TD 20 : 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Factor FTD</td>
<td>1</td>
<td>1.75</td>
<td>3</td>
<td>5.5</td>
<td>10.5</td>
</tr>
</tbody>
</table>

Long-term stability (according to DIN 16086)

Applies to the respective digital signal output (e.g. HART, Profibus PA) as well as to analogue current output 4 … 20 mA under reference conditions. Specifications refer to the set span. Turn down (TD) is the ratio nominal measuring range/set span.

<table>
<thead>

### Temperature derating

![Temperature derating diagram](image)

*Fig. 38: Temperature derating CPT-2x, version up to +130 °C (+266 °F)*

1. Process temperature
2. Ambient temperature

\(^7\) With process fitting PVDF, process temperature max. 100 °C (212 °F).

\(^8\) Measuring cell Ø 28 mm
SIP process temperature (SIP = Sterilization in place)

Applies to instruments configurations suitable for vapour, i.e. material measuring cell seal EPDM or FFKM (Perlast G75S).

Vapour stratification up to 2 h +150 °C (+302 °F)

Process temperature
Temperature derating CPT-2x, version up to +150 °C (+302 °F)

1. Process temperature
2. Ambient temperature

Mechanical stress

Vibration resistance 4 g at 5 ... 200 Hz according to EN 60068-2-6 (vibration with resonance)

Shock resistance 50 g, 2.3 ms according to EN 60068-2-27 (mechanical shock)

Electromechanical data - version IP66/IP67 and IP66/IP68 (0.2 bar)

Options of the cable entry

- Cable entry M20 x 1.5; ½ NPT
- Cable gland M20 x 1.5, ½ NPT (cable ø see below table)
- Blind plug M20 x 1.5; ½ NPT
- Closing cap ½ NPT

Material cable gland/Seal insert

9) Depending on the instrument version.
10) 2 g with housing version stainless steel double chamber
11) IP66/IP68 (0.2 bar), only with absolute pressure.
Wire cross-section (spring-loaded terminals)
- Massive wire, stranded wire  $0.2 \ldots 2.5 \text{ mm}^2$ (AWG 24 ... 14)
- Stranded wire with end sleeve  $0.2 \ldots 1.5 \text{ mm}^2$ (AWG 24 ... 16)

### Electromechanical data - version IP66/IP68 (1 bar)

**Connection cable, mechanical data**
- Configuration  Wires, breather capillaries, strain relief, screen braiding, metal foil, mantle
- Standard length  5 m (16.4 ft)
- Min. bending radius (at 25 °C/77 °F)  25 mm (0.984 in)
- Diameter  approx. 8 mm (0.315 in)
- Colour - version PE  Black
- Colour - version PUR  Blue

**Connection cable, electrical data**
- Wire cross-section  0.5 mm² (AWG 20)
- Wire resistance $R$  0.037 Ω/m (0.012 Ω/ft)

### Electromechanical data - version IP68 (25 bar)

**Connection cable transmitter - external housing, mechanical data**
- Configuration  Wires, strain relief, breather capillaries, screen braiding, metal foil, mantle
- Standard length  5 m (16.40 ft)
- Max. length  180 m (590.5 ft)
- Min. bending radius at 25 °C/77 °F  25 mm (0.985 in)
- Diameter  approx. 8 mm (0.315 in)
- Material  PE, PUR
- Colour  Black, blue

**Connection cable transmitter - external housing, electrical data**
- Wire cross-section  0.5 mm² (AWG 20)
- Wire resistance  0.037 Ω/m (0.012 Ω/ft)

### Display and adjustment module

### 9.2 Communication Profibus PA

In the following, the necessary device-specific details are shown. You can find further information of Profibus PA on [www.profibus.com](http://www.profibus.com).

**Instrument master file**

The instrument master file (GSD) contains the characteristic data of the Profibus PA instrument. These data are, e.g. the permissible transmission rates as well as information on diagnostics values and the format of the measured value output by the PA instrument.

A bitmap file is also provided for the Profibus network planning tool. This file is installed automatically when the GSD file is integrated. The bitmap file is used for symbolic indication of the PA instru-

\textsuperscript{14)} Protection rating IP66/IP68 (0.2 bar) only in conjunction with absolute pressure.  
\textsuperscript{15)} When used with fulfilled housing protection.
ment in the configuration tool.

**ID number**

Each Proﬁbus instrument gets an unambiguous ident number (ID number) from the Proﬁbus user organisation (PNO). This ID number is also included in the name of the GSD ﬁle. Optionally in addition to this manufacturer-speciﬁc GSD ﬁle, PNO also provides a general so-called proﬁle-speciﬁc GSD ﬁle. If the general GSD ﬁle is used, the sensor must be set to the proﬁle-speciﬁc ident number via the DTM software. By default, the sensor operates with the manufacturer-speciﬁc ID number. When using the instruments on a segment coupler SK-2 or SK-3, no special GSD ﬁles are required. The following table shows the instrument ID and the GSD ﬁle names.

**Cyclical data traffic**

The master class 1 (e.g. PLC) cyclically reads out measured values from the sensor during operation. The below block diagram below shows which data can be accessed by the PLC.

---

*Fig. 40: CPT-2x: Block diagram with AI FB 1 … AI FB 3 OUT values*

*TB* Transducer Block

*FB* Function Block

*AI* Analogue Input
Module of the PA sensors
For the cyclic data traffic, CPT-2x provides the following modules:

- AI FB1 (OUT)
  - Out value of the AI FB1 after scaling
- AI FB2 (OUT)
  - Out value of the AI FB2 after scaling
- AI FB3 (OUT)
  - Out value of the AI FB3 after scaling
- Free Place
  - This module must be used if a value in the data telegram of the cyclical data traffic should not be used (e.g. replacement of temperature and Additional Cyclic Value)

A maximum of three modules can be active. By means of the configuration software of the Profibus master you can determine the configuration of the cyclical data telegram with these modules. The procedure depends on the respective configuration software.

Note:
The modules are available in two versions:

- Short for Profibus master supporting only one "Identifier Format" byte, e.g. Allen Bradley
- Long for Profibus master only supporting the "Identifier Format" byte, e.g. Siemens S7-300/400

Examples of telegram configuration
In the following you will see how the modules can be combined and how the appendant data telegram is structured.

Example 1
- AI FB1 (OUT)
- AI FB2 (OUT)
- AI FB3 (OUT)

### 9.3 Calculation of the total deviation

The total deviation of a pressure transmitter indicates the maximum measurement error to be expected in practice. It is also called maximum practical deviation or operational error.

According to DIN 16086, the total deviation $F_{\text{total}}$ is the sum of the basic deviation $F_{\text{perf}}$ and the long-term stability $F_{\text{stab}}$:

$$F_{\text{total}} = F_{\text{perf}} + F_{\text{stab}}$$

The basic deviation $F_{\text{perf}}$ consists of the thermal change of the zero signal and the output span $F_T$ as well as the deviation $F_{K_\ell}$:

$$F_{\text{perf}} = \sqrt{(F_T)^2 + (F_{K_\ell})^2}$$

The thermal change of zero signal and output span $F_T$ is specified in chapter "Technical data". The basic temperature error $F_T$ is shown in a graphic. Depending on the measuring cell version and Turn down, this value must be multiplied with the additional factors $F_{MZ}$ and $F_{TD}$:

$$F_T \times F_{MZ} \times F_{TD}$$

Also these values are specified in chapter "Technical data".

This applies for a digital signal output through HART, Profibus PA or Foundation Fieldbus. With a 4 … 20 mA output, the thermal change of the current output $F_a$ must be added:

$$F_{\text{perf}} = \sqrt{(F_T)^2 + (F_{K_\ell})^2 + (F_a)^2}$$

To provide a better overview, the formula symbols are listed together below:

- $F_{\text{total}}$: Total deviation
- $F_{\text{perf}}$: Basic deviation
- $F_{\text{stab}}$: Long-term stability
- $F_T$: Thermal change of zero signal and output span (temperature error)
9.4 Practical example

Data
Pressure measurement in the pipeline 4 bar (400 KPa)
Product temperature up to 50 °C
CPT-2x with measuring range 10 bar, deviation < 0.2 %, process fitting G1½ (measuring cell ø 28 mm)

1. Calculation of the Turn down
TD = 10 bar/4 bar, TD = 2.5 : 1

2. Determination temperature error $F_T$

$F_T = F_{TBasis} \times F_{MZ} \times F_{TD}$

$F_{TBasis} = 0.15\%$

$F_{MZ} = 3$

$F_{TD} = 1.75$

$F_T = 0.15\% \times 3 \times 1.75$

$F_T = 0.79\%$
3. Determination of deviation and long-term stability

The required values for deviation $F_{Kl}$ and long-term stability $F_{stab}$ are available in the technical data:

<table>
<thead>
<tr>
<th>Accuracy class</th>
<th>Non-linearity, hysteresis and non-repeatability</th>

<td>&lt; 0.05 % x TD</td>
<td>&lt; 0.1 % x TD</td>
</tr>
<tr>
<td>Five years</td>
<td>&lt; 0.1 % x TD</td>
<td>&lt; 0.2 % x TD</td>
</tr>
<tr>
<td>Ten years</td>
<td>&lt; 0.2 % x TD</td>
<td>&lt; 0.4 % x TD</td>
</tr>
</tbody>
</table>

Tab. 28: Determination of the long-term stability from the table, consideration for one year: $F_{stab} = 0.05 \% x TD$

4. Calculation of the total deviation - digital signal outputs

1. step: Basic deviation $F_{perf}$

$F_{perf} = \sqrt{(F_T)^2 + (F_{Kl})^2}$

$F_T = 0.79\%$

$F_{Kl} = 0.2\%$

$F_{perf} = \sqrt{(0.79\%)^2 + (0.2%)^2}$

$F_{perf} = 0.81\%$

2. step: Total deviation $F_{total}$

$F_{total} = F_{perf} + F_{stab}$

$F_{perf} = 0.81\%$ (result of step 1)

$F_{stab} = (0.05\% \times TD)$

$F_{stab} = (0.05\% \times 2.5)$

$F_{stab} = 0.125\%$

$F_{total} = 0.81\% + 0.125\% = 0.94\%$

The total deviation of the measurement is hence 0.94\%.

Deviation in bar: 0.94 % of 4 bar = 0.038 bar

The example shows that the measurement error in practice can be considerably higher than the basic deviation. Reasons are temperature influence and Turn down.
